

rPlatform™ - The RFID Platform

rPlatform™ is a robust, extensible, standards-based RFID middleware product for use across the entire enterprise.

rPlatform™ Uses:

- Asset Tracking
- Inventory Tracking and Management
- Warehouse Management
- Electronic Pedigree
- Product Authentication
- Smart Shelving

rPlatform™ 3.2 New Features:

- Several Additional Transports supported within our ESB
- Admin Dashboard for Monitoring/Health Checks
- Enhanced Role Based Security and encryption
- Alert Rule Manager with notifications

Adapter

rPlatform™ [Adapter](#) provides a uniform interface between EPC Gen 2 UHF and non-standard interrogators and rPlatform™ Analyzer. Adapter processes BizServer alert rules to notify desired recipients using various communication protocols including SMS.

Analyzer

rPlatform™ [Analyzer](#) filters and aggregates raw tag data and conforms input data streams to Application Level Events conforming to EPCglobal ALE 1.0 standards and passes these events to rPlatform™ BizServer.

BizServer

[rPlatform™ BizServer](#) exposes ALE events to enterprise applications or further processes the data to conform to EPCglobal EPCIS events. BizServer uses [secure connections](#), internally and externally over its built-in Enterprise Service Bus.

Enterprise Service Bus

The built-in [Enterprise Service Bus](#) allows rPlatform™ to send Auto-ID data to downstream applications using a variety of transports and file formats.

Visual Designer

rPlatform™ [Visual Designer](#) is rPlatform™'s system-wide graphical configuration and deployment tool.

Our Services

Supply Insight provides various RFID services to our customers including RFID assessment, RFID project management, enterprise integration, technical consulting and RFID implementation support.
